

CPSC 304 Project Cover Page

Milestone #: 4

Date: Nov 30, 2023

Group Number: 30

Name	Student Number	CS Alias (Userid)	Preferred E-mail Address
Andrew Fenton	43711555	w7a1m	andrewfenton898@gmail.com
Ben Vinnick	20038972	s7f3b	benvinnick@gmail.com
Cameron McInnes	61765640	k2h3b	camtmcinnes@gmail.com

By typing our names and student numbers in the above table, we certify that the work in the attached assignment was performed solely by those whose names and student IDs are included above. (In the case of Project Milestone 0, the main purpose of this page is for you to let us know your e-mail address, and then let us assign you to a TA for your project supervisor.)

In addition, we indicate that we are fully aware of the rules and consequences of plagiarism, as set forth by the Department of Computer Science and the University of British Columbia

1. Your completed cover page, as usual.
2. A single SQL script that can be used to create all the tables and data in the database. If you are using multiple scripts while developing, ensure you concatenate them and hand in only a SINGLE SQL script.

Path: project/db-setup.sql

These are assertions we did not add to oracle but should have been added:

- PostalCode_Location is referenced by at least one Payment Information
- Project has at least one associated Payment Tier

3. A PDF file containing:

- a. A short description of the final project, and what it accomplished.

Our final project models a crowdfunding website. As it stands, the website allows users to login, view a list of active projects on the main page, and manage their payment methods. Users can also search for any type of project, see who has donated to each project, and view the top contributors on the platform. Regarding project management, organizations can see the posts and comments made on their project pages and have the ability to delete them.

- b. A description of how your final schema differed from the schema you turned in. i. If the final schema differed, explain why. Note that turning in a final schema that's different from what you planned is fine, we just want to know what changed and why.

We changed the table PaymentInformation from PaymentInformation(CCNumber, CVV, Address, **PostalCode**) to PaymentInformation(CCNumber, **IUsername**, CVV, Address, **PostalCode**) and the table Individual(Username, **PaymentInfo**, DateOfBirth, FirstName, LastName) to Individual(Username, DateOfBirth, FirstName, LastName). This basically flipped the one to many relationship so that a PaymentInfo can only be associated with one Individual and an Individual can now have more than one payment info. This was done in order to meet the requirements for the update query.

- c. A copy of the schema and screenshots that show what data is present in each relation after the SQL script from item #2 is run.

- i. Do not use DDL statements for this deliverable. List the relational schemas with the primary key attributes underlined and foreign keys bolded. For example, Student(sid, name, **dob**).
 - ii. You can complete this deliverable with screenshots from SQL Plus or create a representation of your relational instances through a spreadsheet program. No matter what you use, be sure to clearly label which relation a given instance refers to.

d. A list of all SQL queries used and where it can be found in the code (i.e., file name and line number(s)). For SQL query requirements, check the rubric listed on Canvas for Milestone 4.

Query	project/queries/fileName	Code Line Numbers
Insert	payment.js	53-79
Delete	posts.js	37
Update	payment.js	110-123
Selection	selection.js	4-64
Projection	projection.js	31-36
Join	join.js	3-18
Aggregation with GROUP BY	aggregation.js	22-35
Aggregation with HAVING	aggregation-having.js	3-17
Nested Aggregation with GROUP BY	aggregation.js	5-20
Division	organization.js	51-58

e. Screenshots demonstrating the functionality of each query using the GUI. We want to see a before/during/after progression of events. For example, the before screenshot would be what data is in the table before you run the query, the during screenshot(s) is how the query is triggered using the GUI, and the after screenshot is what data is in your table afterwards. Please label each set of screenshots with the name of the query it is meant to address (e.g., “Insert Operation”).

i. You need only to include screenshots for the required queries – if you implemented more than what was required, screenshots are not needed for those extra queries. 4. Lastly, include a README.txt file if there’s anything you want to add that’s not included in your PDF file.

Query Screenshots
